UNDER DESK COVER

Para librar perfiles bajo tablero

La tapa superior para Under Desk permite salvar vigas estructurales o marcos perimetrales de la mesa, facilitando su instalación en diferentes configuraciones. Dispone de dos posiciones de montaje gracias a su diseño reversible, girando la tapa frontal 180°, según sea necesario para adaptarse a una viga o a un marco perimetral.

To clear profiles under the board

The top panel for the Under Desk model allows you to work around structural beams or the table's perimeter frame, making it easy to install in a variety of configurations. It offers two mounting positions thanks to its reversible design: simply rotate the front panel 180° as required to fit around a beam or perimeter frame.
